

## Meeting Notes Feb 19 2020

### Missing Members:

- Percy: Sick

### Status on last weeks tasks:

- Data Entry Page
  - Buttons, still need formatting for mobile
  - Linked the login page, can be removed from the sidebar
- Database w/ Database queries
- Data Visualization
  - Map of the US now filled with dummy data
  - How to link perl to javascript?
- Sidebar for Mobile
- Home Page
  - Sidebar isn't too bad on mobile with less information at the top. Could place it at the top of the first section so it appears there, or just have it be a hamburger or otherwise.
  - The video and short description existing there will change and we will have the data visualization there, do we want to put anything else on the home page at the moment?
- Sponsor Meeting on the 24th at 2pm

### Meeting Discussion Notes:

- Linking perl to javascript
  - `<script> var mapData = [%jsonMapData%];</script><script>plotly.show(mapData)</script>`
- Sponsor Meeting Questions
  - Ask what they want done with the broken links in the sidebar
  - Update on training information
  - Ozone live data: from database or NCAR measurement?
  - Anything they want updated visually on the website?

### To do before meeting (monday):

- Push everything to the Github before meeting
- Tanya & Kara: finish styling (working on mobile?) of the data entry page
  - Need to add map instead of dropdown menu

To do (upcoming week):

- Percy: Sidebar
- Tanner: Hook up data entry page with database
