

Attendance:

- No missing members

Topics of Discussion

- What have they given us over the break
- What do we need to start working on
- Sponsor meeting coming monday

Meeting Discussion

- We just got the docker, need to have people get it running and learn how to use docker on their machines
- Should have docker working by the meeting next monday
- Need to discuss with them if they have any materials created for the training, anything they have changed in needs after the break.
- Upload docker + previous code from Ryan onto the team Github
- Update the figma if we have time after getting the docker running, could be useful for use by frontend
- Parts of the website that could be difficult
 - Map
 - Data collection (how to link it to their database)
 - Login system
 - Data visualization (they have to give us the program/thing that will visualize it for us, we should only have to link it and display it in the website)
 - How they want the database to work
- Connecting the website to their database should be on the backburner, as it working on our side is more important than trying to get it to control
- They use mySQL? Doublecheck
- How they want people to be verified to be scientists/employees. They dont want citizens to have an account, should we make it so no one can register, or just heavily emphasize that a citizen shouldn't use the sign up or login feature. (should be in notes and trello)
