

Meeting Notes Feb 26 2020

Missing Members:

-

Status on last weeks tasks and Sponsor Meeting:

- We should be receiving training information by next week's friday
- Training still wasn't done even when we told them that we would need it by February

Meeting Discussion Notes:

- We have the map and data visualization started.
- Need to create the 'game'/'activity' they want to see in the training section of the website, they should provide images and whether the image is an ozone damaged leaf, different source of damage or undamaged leaf
- They wanted us to prevent them from doing data collection before successfully doing the training part
 - This is hard to do, and the best we can do is highly encourage a user to go to the training page if they just go to the data collection page from the home page

-

To do (upcoming week):

- Data entry page needs further formatting after the information received from the last sponsor meeting
 - We are going to attempt a 10 step carousel type picker for the data collection part of the website, should be simple enough to get all 10 responses while avoiding a page refresh
- Connect the data entry page with the database through perl
- How to do a login system (Michael) security wise
 - Might need to talk with them about how they do their login stuff
